

Vi

- Vi is a command line text editor.
- It is what we will routinely use to view and edit input/output files when we perform materials simulations.
- There is nothing to install, simply type “vi <filename>” in the command line and the editor will open.
- Key commands
 - i – “insert” mode, you must be in insert mode to type
 - Esc – “command” mode, you can use command mode to navigate quickly and to save
 - ZZ – save and close
 - GG – jump to the end of the document
 - gg – jump to the beginning of the document
 - For more helpful commands (and a good guide) see <https://ryanstutorials.net/linuxtutorial/vi.php>
